RX SAP Setup Types

Last revised March 2023

RXBAR®

Disclaimer

- **This document should be considered a living document that we will update and change as new learnings arise or processes change. It is in no way to be considered complete at the time of publication. The intention of the document is to provide teams with a point of reference to understand how and where the RX business differentiates from typical Kellogg processes, as it pertains to the New Item Form SAP Material Master setup for FERT/Finished Goods and HALB/Semi-Finished Goods only.**

← Go to list of Setup Types

General Details

NIF (New Item Form) – *NIF_Winshuttle_Support@kellogg.com*

- **All RX Bars should be set up to be temperature controlled in the warehouse.**
  - **LIM Update – Does this item require Temp Controlled storage in the Warehouse? = Yes**
  - **Masterfiles – Plant Data Storage 1, Temp. conditions = 05 (keep from heat). This is a global field, so not location specific.**
- **Core Bars (Bars, Kids, Layers and Minis) are manufactured at 1601/Bar Bakers and 1602/Assemblers**
- **Oats are manufactured at 1606/MSI (which will not produce after June 2023).**
- **Nut Butters are manufactured at 1607/Sokol, and can come in jars or pouches.**
- **RX Granola is manufactured at Kelloggs' Coman 1868/Bridgetown and ships out of the Kellogg NSD's.**
  - **Please note: RX Granola does get ZBCS/bracket pricing records loaded, where all other RX items do not.**
- **All RX Displays are produced at and shipped out of 1420/Precision/FST via 12 Associates (vendor).**
- **All RX DTC (and B2B) setups are created and shipped out of 1903/IDS.**
- **Many of the RX items that were brought over during the integration have the same UPC applied to the case and package. They were able to differentiate the two because the GTIN would have a different check digit. This does not follow Kellogg protocol, which is to assign new UPC's to each level. Therefore, new setups done after the integration will have new UPC's assigned at all appropriate levels.**
- **Pricing – At this time, RX retail uses ZBAS (1001) pricing but does not use bracket pricing. RX retail also uses ZFSP pricing as a temporary workaround for Amazon, Kehe and Supervalu/UNFI's RX specific pricing only. See the pricing slide for more details.**
- **BOM's**
  - **0200 BOM – Non-VAS Variety Packs have a "0200 BOM" requirement. Since there are multiple UPC's, this information is needed for the Data Sync process, so they can communicate to the customer what is inside the variety pack (this does not apply to Club).**
  - **VAS BOM – Required for Displays and Ecomm cases (if built at a VAS location, 0200 BOM if not)**
  - **DTC BOM – Required for DTC setups**
- **RX uses generic cases, so new case Knumbers may not always be needed. Refer to the list of Generic Case Knumbers to confirm.**

Location	Location Name	Location Type	Item Types
1410	3PL - DC - FST - Columbus, OH	DC	
1411	3PL - DC - Roadtex - Chino, CA	DC	
1416	CMP - Bolke-Miller	Copack DC	
1420	3PL - DC - Precision Oswego, I	VAS & DC	Displays
1421	3PL - DC - Bar Bakers - BB Cyp	DC	
1460	NSD - DC - Brampton, ON	CA DC	
1601	CMP- Bar Bakers Calle Lee	Coman	Core Bars, Kids Bars, Layers Bars, Minis Bars
1605	CMP - Hearthside Des Plaines,	Coman	
1606	CMP - MSI Portage, IN	Coman	Oats
1607	CMP - Sokol Countryside, IL	Coman	Nut Butters
1608	CMP- Bar Bakers Bloomfield	Coman	Location not active as of June 2022
1868	CMP- Bridgetown Nat Foods	Coman	RX Granola
1885	CMP - Hearthside Food Solution	Coman	
1903	CMP - 3PL IDS - eCom DTC	Ecomm/DTC VAS & DC	DTC and Ecomm
1906	3PL IDS EComm - B2C	Drop Ship

RX Contacts

NIF (New Item Form) – *NIF_Winshuttle_Support@kellogg.com*

Amazon – Jenna Urbanski, Sarah Allen

B2B (Business to Business) – Greta Walters

BPS/Packaging – Debbie Heiss or Geneva Jones

Brand Marketing (PDR) – Chris Woods, Anna Brook Lowery

Comans, RX – Laura Fabian, Lauren Campau, Ann Longon

Costing, Comans – Coman Finance, Gary Gordon

Costing, RX Displays, Repacks, DTC & Ecomm – GBS Finance, Aaron Ismirle

Commercial Strategy (PWR) – Daniel Rodriguez, Rachel Wozniak

Data Sync – Shanan Walker

Demand Planning/Forecasting – Abby Miller

Displays Requirements (RFQ) – Wes Althaus

DTC (Direct to Consumer) Sales – Michael Martahus

EDI – ProEcommerce@kellogg.com

Finance – Adam Talbot (US), George Skantzos (CA), Sakina Gunja (CA)

LIM – Carrie Driscoll

LPM – Paul Gilbert

Masterfiles – Masterfiles@kellogg.com

Material Master – Marie Smith, Bobbi Youngs

NIF (New Item Form) – NIF_Winshuttle_Support@kellogg.com

Nutrition – Vicky Baraldi

Packaging Engineer – Joe Johnson

Packaging Item Setup – ProcurementSharedServicesKNA@kellogg.com and PackingItemSetup@kellogg.com

Pricing, Data Governance – Becky Noffsinger

Product Hierarchy – Bobbi Youngs

Quality – Grace Kang, Anna Kim (backup)

Sales Reporting – Sue Fondakowski, Amazon

Supply Chain Business Partner – Lindsay Quigno

Supply Chain, Transportation – Phani Neerukonda

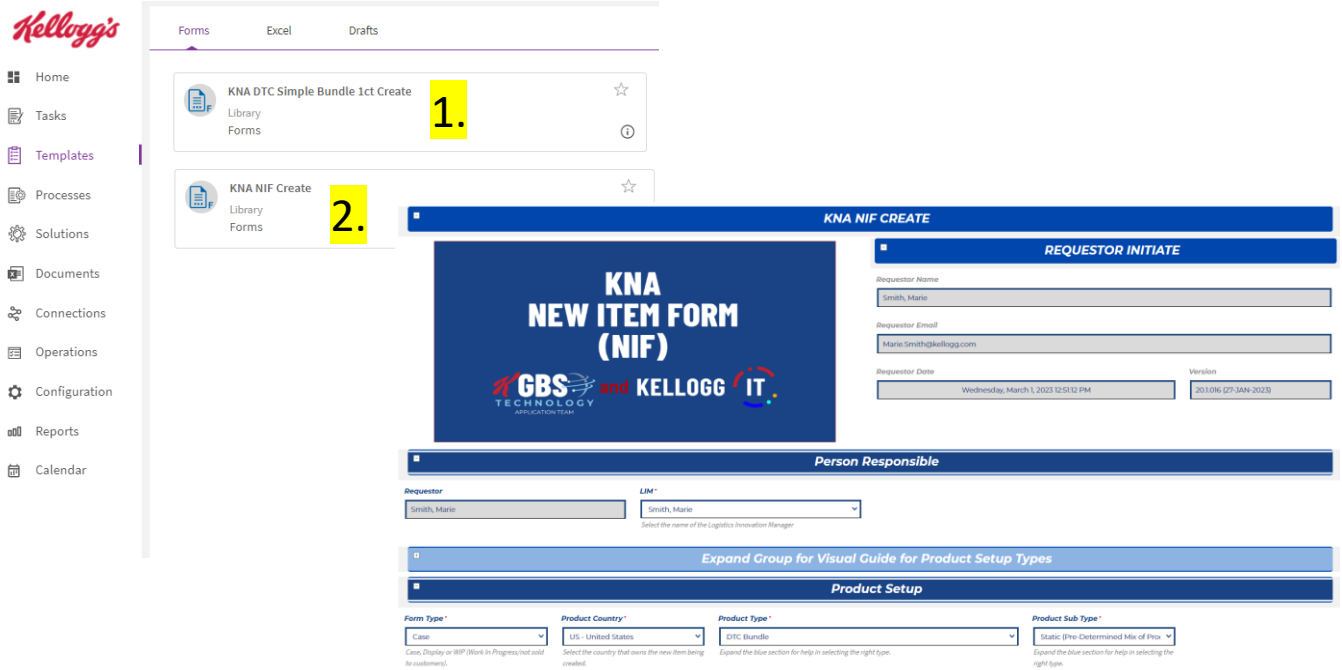
Supply Planning – Frank Roth, Christy Bradshaw

TPM – Jim Walsh, Hilario Cabrera

← Go to list of Setup Types

What is a ‘Setup Type’?

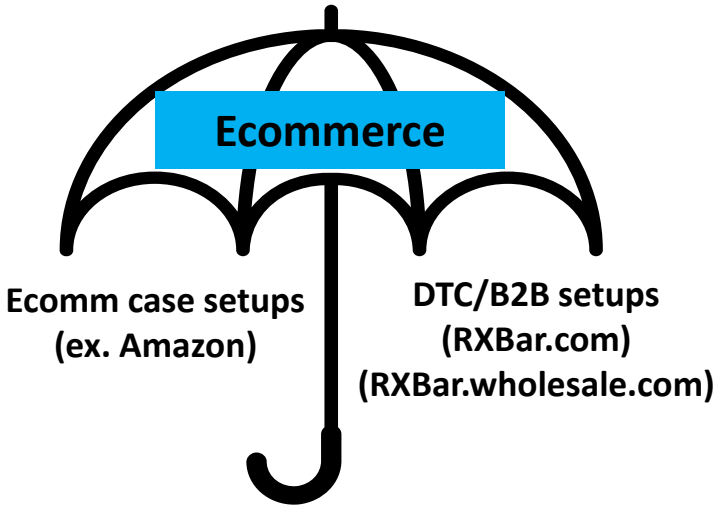
- **“Setup Type” is a term used to describe the way an item needs to be set up in SAP. Each one has its own unique, pre-defined, standardized requirements. It is a choice that is made in the New Item Form when submitting a request to create a new item in SAP.**
- **There are only two DTC setup types available, which are created using the following forms:**
  1. **<u>KNA DTC Simple Bundle 1ct Create</u> is used to create the DTC Bundle, Simple**
  2. **<u>KNA NIF Create</u> is used to create the DTC Bundle, Static**



← Go to list of Setup Types

Ecommerce

- **Ecommerce (electronic commerce) is the buying and selling of goods and services, or the transmitting of funds or data, over an electronic network, primarily the internet. At this time, for Kellogg, Ecommerce includes business transactions that occur either as business-to-business (B2B), or direct-to-consumer (DTC).**
- **Setup types for items that will be sold under the Ecommerce "umbrella" in the New Item Form include Ecomm cases and the DTC setups.**
  - **The Ecomm setup type is used to create an item specifically for a Customer for sale on their ecommerce platform (i.e. Amazon). These items are typically set up when there is no Retail Straight Case available with the desired products (ex. a specific variety pack that doesn't exist as a Retail Straight Case).**
  - **DTC setup types are meant to be sold on Kellogg's ecommerce platform, Magento. Magento is used for both DTC (RXBar.com) and B2B (RXBar.wholesale.com) sales. For this reason, the DTC setup types are used for both DTC and B2B. Since they both use Magento, the unique SAP requirements that are needed for the DTC setups are the same for B2B. Therefore, they can use the same setup types and use unique ZBAS pricing conditions which are maintained in separate customer sales orgs. See the next slide or the pricing slide for more details.**
- **Please note! Retail cases cannot be sold DTC or B2B. This is because they have their own unique SAP requirements, which are very different from the DTC/B2B setups.**



← Go to list of Setup Types

Direct to Consumer (DTC) Setup Types

- **The DTC setup types have unique requirements so they can be sold on Kellogg's ecommerce platform, Magento. Magento is used for both DTC (RXBar.com) and B2B (RXBar.wholesale.com) sales. For this reason, the DTC setup types are used for both DTC and B2B.**
  - **Please note: This is different from the Ecomm setup type, which is meant to describe an item that is created specifically for a Customer for sale on their ecommerce platform (i.e. Amazon).**
- **Pricing**
  - **RX DTC items have their own unique ZBAS pricing (and no bracket pricing). The difference is this pricing is loaded into a specific sales org, created exclusively for DTC sales: 1012. This pricing is higher than the retail pricing.**
  - **RX B2B (Business To Business) also sell the DTC items, but their pricing is loaded into sales org 1001 (as opposed to 1012). This pricing is lower than the DTC pricing and is usually the retail case price divided by the number of packages in the case, depending on the setup type.**
  - **See the pricing slide for more details.**
- **While these items are assembled by VAS type activity at 1903/IDS, BPS is the packaging contact for these, so they do route to Nutrition Labeling.**
  - ***DTC (and B2B) setup types:***
    - **DTC Simple Bundle (1 count) – set up via the KNA DTC Simple Bundle 1ct Create form**
    - **DTC Static Bundle (>1) – set up via the KNA NIF Create form**
    - **DTC Dynamic Bundle (customer chooses the product) – ON HOLD**
- **Please note: Since DTC and B2B use separate websites, if you aren't selling the same item on both websites, then you need to set up a new item.**
  - **RX Granola is a good example of where we needed separate setups for both.**
    - **DTC is selling the granola as Simple Bundles, 1 counts, on the DTC site, NOT as a 6 count.**
    - **B2B is selling the granola as 6 count Static Bundles (>1) on the B2B site, NOT as 1 counts.**

← Go to list of Setup Types

Ecomm Setup Type

NIF (New Item Form) – *NIF_Winshuttle_Support@kellogg.com*

- **Ecomm is a term used to describe a specific type of setup found in the NIF (New Item Form) that is created for Ecommerce customers (i.e. Amazon) for sale on their Ecommerce platform. These items are typically set up when there is no Retail case available with the desired products (ex. a specific variety pack that doesn't exist as a Retail case).**
- **This is different from the DTC (and B2B) setup types, in that the DTC setups are created for sale on Kellogg's ecommerce platform (Magento).**
- **Pricing**
  - **Please Note for Amazon: Amazon can purchase retail cases, so an Ecomm case setup is not required if the retail case is sufficient. However, if the intention is to sell the Retail case at a higher price than the Retail ZBAS (1001) price, ZFSP Amazon Pricing records must be created. If they are not created, Amazon will receive Retail ZBAS (1001) pricing.**
  - **See the pricing slide for more details.**
- **While these are assembled by VAS type activity, BPS is the packaging tech for these, so they do route to Nutrition Labeling.**
- ***Examples of different Ecomm setups:***
  - **Black generic package with pouches inside**
  - **Generic corrugate case, with multiple black generic packages inside**
  - **Generic corrugate case, with packages (or sleeves) inside**
  - **Printed case, with packages (or sleeves) inside**

← Go to list of Setup Types

Pricing

- **ZBAS – This is the base price for all retail customers. ZBAS is always assigned to a (FERT/Finished Goods) Material when it is set up. Retail pricing adjustments, such as customer pickup or promotional allowances, pivot off the ZBAS price.**
  - ***How is this different for RX?***
    - **RX retail (excluding oats and granola) uses ZBAS pricing but does not use *bracket pricing. There is a project to implement this, however the timing for when this will be rolled out is unknown at this time.**
      - **Please note: RX oats and granola do use bracket pricing.**
    - **RX DTC (Direct To Consumer) have their own, unique setups that also use ZBAS pricing, and no bracket pricing. The difference is this pricing is loaded into a specific sales org, created exclusively for DTC sales: 1012. This pricing is higher than the retail pricing.**
    - **RX B2B (Business To Business) also sell the DTC setups, but their pricing is loaded into sales org 1001 (as opposed to 1012). This pricing is lower than the DTC pricing and is usually the retail case price divided by the number of packages in the case.**
- **ZFSP – ZFSP was designed as the AFH (Away From Home) base price for AFH customers. It is not setup as part of the NIF process. It requires a separate request that is sent to Masterfiles when used for AFH.**
  - ***How is this used for RX?***
    - **RX retail (not DTC/B2B) uses ZFSP pricing as a temporary workaround for Amazon, Kehe and Supervalu/UNFI's RX specific pricing only. This is different from the typical ZFSP pricing that AFH uses (noted above), that requires CAW, UOM, etc. The team would like to move away from this with the implementation of the bracket pricing, but for now, these pricing records are needed if the item we are selling is not a customer specific Amazon item. Customer specific Amazon items can use ZBAS. However, if Amazon wants to sell a retail case, the custom ZFSP pricing must be entered, or the price will default to the retail ZBAS price.**
    - **The RX ZFSP form, link is below, should be sent by the Requestor to Masterfiles at Masterfiles@kellogg.com, with a copy to Becky Noffsinger.**
      - **Link to the form: RX Amazon Pricing (ZFSP)**

** Bracket pricing adjusts wholesale customers' prices based on order quantities (full truckload, for example). Brackets are applied only in Sales Org 1001 and assigned to customers based on the Sales Channel they're in. The DTC and B2B Sales Channels are not included in the Bracket program because of the differences in shipping methods and quantities.*

← Go to list of Setup Types

* Non-Standard

Costing

RX Displays, Repacks, DTC & Ecomm – *GBS Finance, Aaron Ismirle*
Comans – *Coman Finance, Gary Gordon*
RFQ (Request for Quotient) for Displays *Wes Althaus*
NIF (New Item Form) – *NIF_Winshuttle_Support@kellogg.com*

- **All items must be costed in SAP prior to production. While the timing for costing can vary, this activity generally occurs around 2-3 weeks prior to this date, approximately 3-4 weeks before First Ship.**
- **The process varies based on where or how the item is produced. Most of the RX retail items are created at Co-manufacturers (Comans), whereas most of the Displays, Repacks, DTC (Direct to Consumer) and Ecomm cases are created at specific DC's.**
  - **Retail items (ex. Straight Cases, Club)**
    - **These items are created at one of the following locations and are costed by Coman Finance – Gary Gordon.**
      - **1601/Bar Bakers, 1602/Assemblers, 1605/Hearthside, 1606/MSI, 1607/Sokol, 1608/Bar Bakers (Bloomfield), 1885/Hearthside**
    - **Requests should go through the appropriate Co-Man Manager of the location**
    - **The Co-man Manager will communicate with Procurement Shared Services (PSS) to set up the RFQ's (Request for Quotient)**
    - **The Co-Man Manager then sends the price sheet with the BOM configuration to Coman Finance**
    - **The Co-Man Manager then sends the recipe with the usage probabilities to Masterfiles to load into SAP**
    - **Coman Finance will build the BOM's (Bill of Materials) based on the price sheet and recipe, incorporating Fixed Overhead or Depreciation if necessary.**
    - **SKUs are then marked and released by Coman Finance, then passed on to GBS Plant Finance for composites.**
  - **RX Displays, Repacks, DTC and Ecomm cases**
    - **These items are created at one of the following locations and are costed by GBS Finance – Aaron Ismirle.**
      - **1410/FST (Repacks), 1420/Precision (Displays) and 1903/IDS (DTC)**
    - **Displays that are built at 1420/Precision require an RFQ (Request for Quote) which is the additional cost of labor to create the item. Wes Althaus provides the RFQ to Procurement Shared Services KNA, who enters it into SAP. Once the RFQ is entered, GBS Finance can cost the item.**
    - **DTC that do not have to be repackaged, are typically just labeled so an RFQ is not needed.**
  - **Once the costing has been entered, an email is sent to RTR.Pricing.NA@Kellogg.com to enter the Intercompany costing. Once this is completed, they will reply to the email that the ICP's have been entered, copying in Masterfiles. Masterfiles then updates the status for the new item from Z1/New to Z2/Active.**

← Go to list of Setup Types

EDI Xref Table

EDI – *ProEcommerce@kellogg.com*
NIF (New Item Form) – *NIF_Winshuttle_Support@kellogg.com*

- **All DTC Simple and Static Bundles must be added to the EDI Xref table. This is because they share the same package and (pouch UPC where applicable) as the Retail Straight Case. Since these items can be ordered using the pouch, package or Case UPC, they need to be added to the table, so they post correctly to the order. If they are missing from the table, this will cause an EDI Dummy and the order will fail.**
  - **Please note – We have recently identified a process to proactively enter the items into the EDI table, which will be incorporated into the new item set up process. An email notification will be automatically sent to cls.ecommerce@kellogg.com to make the entries. Until that work is complete, Masterfiles will need to send the notification to EDI.** ***More details to be added once the process is in place.***

CMIR – Customer Master Information Record

General Information – *Kate Rogers*
NIF (New Item Form) – *NIF_Winshuttle_Support@kellogg.com*

- ***There is still a need to develop an ongoing process to update CMIR records as a part of new material and new customer set up*. As part of the RX integration, CMIRs were created for existing RX materials. In May of 2022, there was a clean up exercise completed for all new materials created since integration.**
- **The CMIR (customer master information record) records are needed because RX Materials generally ship from one of 3 locations (below). Every sold-to (customer) can only be tied to one default shipping location. In order for a sold-to to get an item from a different location from the default, there needs to be a CMIR record present. *This does not apply to the DTC setup types.***
  - **Non-shippers will ship from 1410 or 1411, depending on their geographic location**
  - **Shippers will always ship from 1420**
- **The following forms have MACROs that streamline the creation of CMIR records for a large number of materials or customer.**
  - **Non Shippers**
  - **Shippers**
- **The following people provided inputs for the forms:**
  - **Material Numbers: LIMs**
  - **Plant: RX Supply Chain Business Partner**
  - **Forms were created by Jonathan Bakker**
  - **Questions can be directed to Kate Rogers**
- **Once the forms are filled out, they should be submitted to the Customer Masterfiles Team at Masterfiles@kellogg.com. The team will copy and paste the info into a Winshuttle to update the system.**

Microsoft Excel Worksheet

RX CMIR Sold To List as of 5/2/22

* Non-Standard

Internal RX Coman WIP

1601/Bar Bakers – *Laura Fabian, Lauren Campau*
1606/MSI & 1607/Sokol – *Ann Longon*
Internal RX Coman WIP setups – *Marie Smith*
NIF (New Item Form) – *NIF_Winshuttle_Support@kellogg.com*

- **Internal RX Coman WIP (Work In Progress) setups are needed only for items that are produced at 1601/Bar Bakers, 1606/MSI and 1607/Sokol. This is because the locations use Kellogg Owned materials, so they need to be able to track the inventory. They can do that with these internal (non-shippable) WIP's. Most often, these are created when there is a new Recipe, which can happen when a new flavor, brand or format is introduced.**
- **Please note: There was a project to convert these locations to Non-Kellogg Owned materials, which would have negated the need for these setups. For this reason, we did not create a Setup Type for it in the New Item Form. The project was not approved so we have this in the list to add to the NIF process at some point. Until that time, the setups will continue to be done manually (covered below).**
- **These items are unique in that they are set up with an EA (Each) base unit of measure. This is because Bar Bakers' contract is in EA (Each), where typically, we set WIP's up as Totes or Kones (LB) and Cases (CS).**
- **Pricing**
  - **WIP's are not sold, so no ZBAS pricing is required.**
- **There is no form for these setups currently. Follow the instructions below for setup.**
  - **The LIM should provide the 1) Material Number for the new Retail case, 2) the estimated standard cost of the WIP (at the bar level) and 3) the production location to Marie Smith and she will set it up in SAP.**
  - **Once the setup is completed, the LIM will need to provide the new WIP material number to Finance for costing.**
- **Other info/contacts:**
  - **Coman Contract Manufacturing contact for 1601/Bar Bakers – Laura Fabian**
  - **Coman Contract Manufacturing contact for 1606/MSI, 1607/Sokol – Ann Longon**
  - **List of active Internal RX Coman WIPs as of 10/20/22**

← Go to list of Setup Types

RX Setup Types – US & CA

NIF (New Item Form) – *NIF_Winshuttle_Support@kellogg.com*

Please note: This list of setup types is a representation of the types of RX setups are in SAP as of July 2022. For a full list of available setup types, please see the NIF Training Deck.

Form: None
Setup Type: Internal RX Coman WIP – 1601/Bar Bakers, 1606/MSI, 1607/Sokol

NIF (New Item Form) – *NIF_Winshuttle_Support@kellogg.com*

- **This item has a Retail counterpart (Retail case), but no UPC's are used in the UOM.**
- **Intention is to create an item to track inventory, at the lowest level, at the Coman, since at this time, they are using Kellogg Owned Materials. This applies to locations 1601/Bar Bakers, 1606/MSI, and 1607/Sokol only.**
- **Setup would be done as part of new item setup for a Straight Case with Package Setup Type for Retail (Base Material only – example would be a new flavor or new brand). There is no form since these items were initially only temporarily needed until the Coman was transitioned to No Kellogg Owned Materials. Unfortunately, this project was not approved. This has been added to the list of updates to the New Item Form, completed TBD. For now, follow the below process.**
- **The LIM should provide 1) Material Number for the new Retail case, and 2) the estimated standard cost of the WIP (at the bar level) and 3) the production location to Marie Smith and she will set it up in SAP.**
- **The estimated standard cost is calculated using the retail case standard cost. Ex: 35.00 / 6 / 12 = .49**
- **These are not sold, so a selling price (Red K/ZBAS) is not required.**
- **The LIM will need to provide the new WIP material number to Finance for costing.**
- **Unique SAP Setup Requirements:**
  - **Setup manually, with an EA base unit of measure, copying from a like item - 170010077.**
  - **Setup at location 1601/Bar Bakers, 1606/MSI or 1607/Sokol ONLY (not at 0300)**
  - **Storage Location = 0001/Finished Goods ONLY**
  - **Sales Org = 1008 ONLY**
  - **BOM is set up by Coman Finance**

← Back to list of Setup Types

Form: KNA NIF Create
Form Type: Case
Product Type: Bulk Case
Product Sub Type: Unique Package UPC
Example SAP Material Number: 19390800001, One Flavor

NIF (New Item Form) – *NIF_Winshuttle_Support@kellogg.com*

- **Bulk is a term used to describe setup types for items are often created for Food Service customers. The Bulk Case, Unique Package UPC setup type consists of a case that has a unique UPC, and packages inside that have a unique UPC. Because we can not skip levels in the unit of measure, the package can be cartons, sleeves or pouches. In our bulk example, the package is technically a pouch. However, since there is no package (sleeve), and we cannot skip levels in SAP, the pouch becomes the package. These are created at a Coman.**
- **Since both the Case and the Packages inside the case have unique UPC's, the number of Packages per Case is set to >1.**
- **If this item had multiple flavors inside (Bulk Case, No Package UPC setup type in the NIF), with multiple UPC's, we would apply the case UPC to the package level. This is because we obviously cannot assign a new UPC to the packages, and we cannot just choose one of the UPC's that already exist. For this reason, we apply the case UPC to the package when there are multiple package UPC's. Additionally, we would need to gather the "0200 BOM" information from the Requestor. This information is needed for the Data Sync process, so they can communicate to the customer what is inside the variety "case" (this does not apply to Club). See 0200 BOM slide for more details.**
- **In the screenshot of the Units of Measure (UOM), note that the number of Packages in the case is 180, and both the case and package have unique UPC's.**
- **In the screenshot of the Bill of Materials (BOM), note that it was set up at the Coman, and that the Internal RX Coman WIP was used.**
- **Pricing – ZBAS/Red K (1002) for Canada, or ZBAS/Red K (1001) and ZFSP if AFH (Away From Home) is selling the item for the US.**
  - **Please Note: If Amazon intends to sell the item, custom ZFSP records must be entered. This is considered a *temporary workaround* for Amazon. See the pricing slide for more details.**

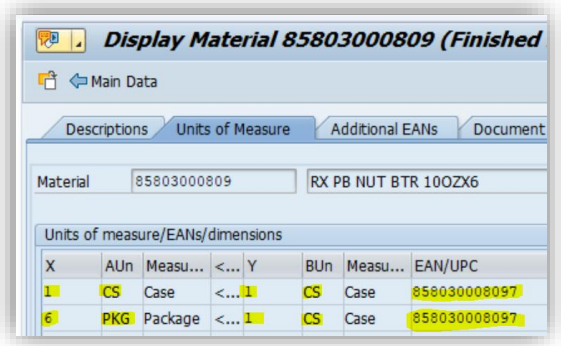
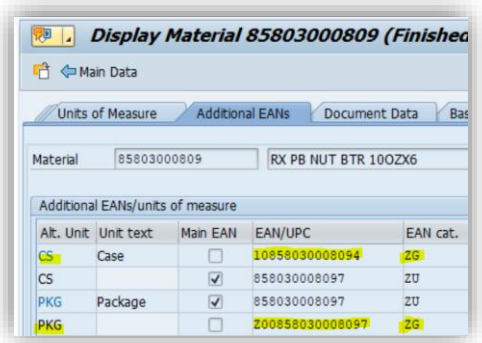
← Back to list of Setup Types

Form: KNA NIF Create
Form Type: Case
Product Type: Straight Case
Product Sub Type: Package with UPC
Example SAP Material Number: 85803000809, One Flavor

NIF (New Item Form) – *NIF_Winshuttle_Support@kellogg.com*

- **This setup type is a typical retail case that consists of a case with a unique UPC, and packages inside that have a unique UPC. These items are created at a Coman.**
- **This setup type is what is called the "base" or "parent" item. Any items created after, that use the same package UPC, must be created as a Repack setup type, or a "child" item. This is because we can only have one "base" or "parent" item in SAP at a time. These base materials must be set up in SAP first. Once they are set up in SAP, the "child" items, such as repacks (lower or higher case counts) can be set up.**
  - **Please note: When submitting forms for PDR's or PWR's, please submit the Straight Case setup type first. Once codes are assigned, the forms can be submitted for the repacks, displays and DTC items. This is because the newly assigned UPC's will need to be used in the New Item Form submissions for the other setups. Again, as noted above, ensure that the Straight Case is set up in SAP first, then the others can follow.**
- **If this item is not already offered for sale as a DTC item, but is approved to be sold DTC, ensure that the setup is completed in SAP. On the Requestor Update task for the Straight Case setup, there is a question, "Will the item be sold at the package level Direct To Consumer?" Answer this question as "Yes". This will automatically kick off a NIF task to start the DTC Simple Bundle 1ct form for the package level setup after the Straight Case has been set up in SAP.**
- **Since this item only has one flavor (so only one UPC on the package), we do not need to gather the "0200 BOM" information from the Requestor. This information is only needed for the Data Sync process when there is a variety of flavors/UPC's inside (this does not apply to Club).**
- **Pricing – ZBAS/Red K (1002) for Canada, or ZBAS/Red K (1001) and ZFSP if AFH (Away From Home) is selling the item in the US.**
  - **Please Note: If Amazon intends to sell the item, custom ZFSP records must be entered. This is considered a *temporary workaround* for Amazon. See the pricing slide for more details.**





The first SAP screenshot is of the UOM. You can see that the UPC is the same for the case and the package levels, but the GTIN's differ in the second screenshot. This does not follow Kellogg protocol. New items set up after the integration will have unique UPC's for case and package levels.

Unique UPC is assigned to the case

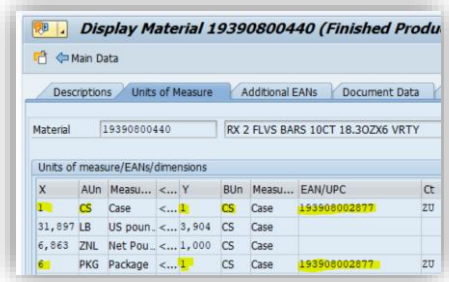
Unique UPC is assigned to the package

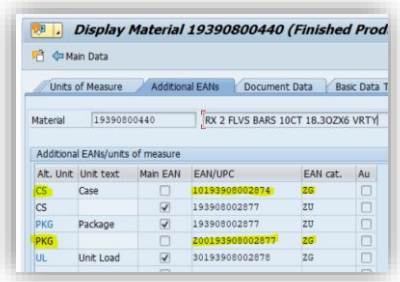
← Back to list of Setup Types

Form: KNA NIF Create
Form Type: Case
Product Type: Straight Case
Product Sub Type: Package with UPC
Example SAP Material Number: 19390800440, Variety Pack

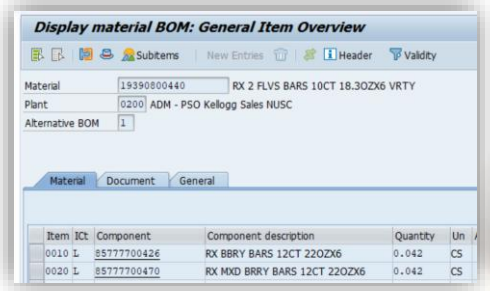
NIF (New Item Form) – *NIF_Winshuttle_Support@kellogg.com*

- **This example of a Straight Case, Package with UPC setup is referred to as a Variety Pack. They are usually created at Coman's, which means we would need to gather the "0200 BOM" information from the Requestor. This information is needed for the Data Sync process, so they can communicate to the customer what is inside the variety pack (this does not apply to Club).**
- **This is a typical retail case that consists of a case with a unique UPC, and packages inside that have a unique UPC. What makes it a little different is that even though this item *technically* does have pouches, we do not go down to that level since there are multiple pouch UPC's.**
- **This setup type is what is called the "base" or "parent" item. Any items created after, that use the same package UPC, must be created as a Repack (or DTC) setup type, or a "child" item. This is because we can only have one "base" or "parent" item in SAP at a time. These base materials must be set up in SAP first. Once they are set up in SAP, the "child" items, such as repacks (lower or higher case counts) and DTC items can be set up.**
  - **Please note: When submitting forms for PDR's or PWR's, please submit the Straight Case setup type first. Once codes are assigned, the forms can be submitted for the repacks, displays and DTC items. This is because the newly assigned UPC's will need to be used in the New Item Form submissions for the other setups. Again, as noted above, ensure that the Straight Case is set up in SAP first, then the others can follow.**
- **If this item is not already offered for sale as a DTC item, but is approved to be sold DTC, ensure that the setup is completed in SAP. On the Requestor Update task for the Straight Case setup, there is a question, "Will the item be sold at the package level Direct To Consumer?" Answer this question as "Yes". There will be a section in the Category Finance task to gather the pricing for the DTC package level item. This will also automatically kick off a NIF task to start the DTC Form for the package level setup after the Straight Case has been set up in SAP.**
- **Pricing – ZBAS/Red K (1002) for Canada, or ZBAS/Red K (1001) and ZFSP if AFH (Away From Home) is selling the item for the US.**
  - **Please Note: If Amazon intends to sell the item, custom ZFSP records must be entered. This is considered a *temporary workaround* for Amazon. See the pricing slide for more details.**





The first SAP screenshot is of the UOM. You can see that the UPC is the same for the case and the package levels, but the GTIN's differ in the second screenshot. This does not follow Kellogg protocol. New items set up after the integration will have unique UPC's for case and package levels.



0200 BOM for Data Sync. We need to communicate with customers what is contained inside ONE variety pack.

Unique UPC is assigned to the case

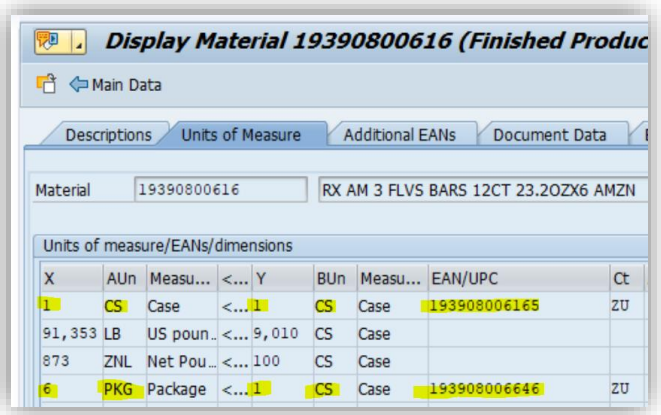
Unique UPC is assigned to the package

← Back to list of Setup Types

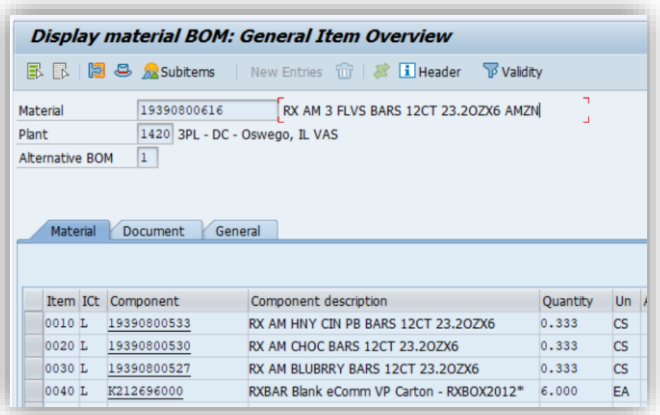
Form: KNA NIF Create
Form Type: Case
Product Type: Straight Case
Product Sub Type: Package with UPC
Example SAP Material Number: 19390800616, Amazon Variety Pack

NIF (New Item Form) – *NIF_Winshuttle_Support@kellogg.com*

- **This setup example of a Straight Case, Package with UPC is a customer specific case created exclusively for Amazon. It consists of a case with a unique UPC, and packages inside that have a unique UPC. Even though this item technically does have pouches, we do not go down to that level since there are multiple pouch UPC's.**
- **Typically, Variety Packs are created at a Coman and we would need to gather the "0200 BOM" information from the Requestor. This information is needed for the Data Sync process, so they can communicate to the customer what is inside the variety pack (this does not apply to Club). However, this particular item is actually created by a VAS (Value Added Services) type process at a DC. For this reason, we would instead gather the VAS BOM details from the Requestor. This VAS BOM will satisfy the Data Sync BOM requirements.**
- **Pricing – ZBAS/Red K (1001). Because this item is specific to Amazon, the Amazon price can be loaded into SAP as ZBAS (1001), and ZFSP records are not required. See the pricing slide for more details.**



SAP screenshot is of the UOM. You can see that both UPC's are unique for the case and package levels. This is a variety pack. Because there are multiple pouch UPC's, we do not go down to the pouch level.



VAS BOM – this process is creating 6 eComm packages at a time and putting them in a case.

Unique UPC is printed on a label and attached to the case

Unique UPC is printed on a Label and attached to the package

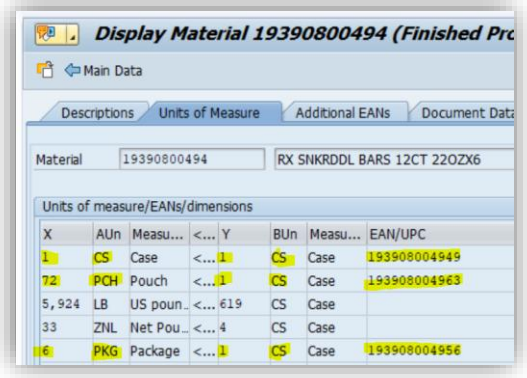
Unique UPC's are printed on the pouches, but not added to SAP.

← Back to list of Setup Types

Form: KNA NIF Create
Form Type: Case
Product Type: Straight Case
Product Sub Type: Package and pouch/inner item with UPC's
Example SAP Material Number: 19390800494, One Flavor

NIF (New Item Form) – *NIF_Winshuttle_Support@kellogg.com*

- **This setup type is a typical retail case that consists of a case with a unique UPC, packages inside that have a unique UPC, and pouches inside that have a unique UPC. These items are created at a Coman.**
- **Please note: If you are creating a new package that has a variety of flavors (pouches) inside, with their own unique UPC's, you would NOT use this set up type. You would use the Straight Case, Package with UPC setup type. This is because even though this item *technically* does have pouches, we do not go down to that level since there are multiple pouch UPC's.**
- **This setup type is what is called the "base" or "parent" item. Any items created after, that use the same package UPC, must be created as a Repack (or DTC) setup type, or a "child" item. This is because we can only have one "base" or "parent" item in SAP at a time. These base materials must be set up in SAP first. Once they are set up in SAP, the "child" items, such as repacks (lower or higher case counts), Displays and DTC items can be set up.**
  - **Please note: When submitting forms for PDR's or PWR's, please submit the Straight Case setup type first. Once codes are assigned, the forms can be submitted for the repacks, displays and DTC items. This is because the newly assigned UPC's will need to be used in the New Item Form submissions for the other setups. Again, as noted above, ensure that the Straight Case is set up in SAP first, then the others can follow.**
- **If this item is not already offered for sale as a DTC item, but is approved to be sold DTC, ensure that the setup is completed in SAP. On the Requestor Update task for the Straight Case setup, there is a question, "Will the item be sold at the package level Direct To Consumer?" Answer this question as "Yes". This will automatically kick off a NIF task to start the DTC Form for the package level setup after the Straight Case has been set up in SAP.**
- **Pricing – ZBAS/Red K (1002) for Canada, or ZBAS/Red K (1001) and ZFSP if AFH (Away From Home) is selling the item for the US.**
  - **Please Note: If Amazon intends to sell the item, custom ZFSP records must be entered. This is considered a *temporary workaround* for Amazon. See the pricing slide for more details.**



SAP screenshot is of the UOM. You can see that all three UPC's are unique for the case, package and pouch levels.

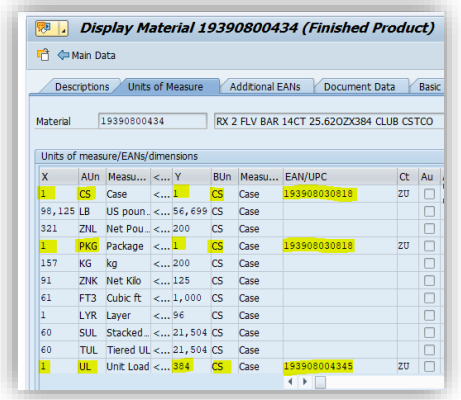
Unique UPC is assigned to the case, package and pouch

← Back to list of Setup Types

Form: KNA NIF Create
Form Type: Case
Product Type: Club
Product Sub Type: Traditional 1 PKG = 1 CS
Example SAP Material Number: 19390800434, Variety

NIF (New Item Form) – *NIF_Winshuttle_Support@kellogg.com*

- **This setup type refers to a specific type of setup that is done for Club customers (i.e. Sam's, Costco). Traditional 1 PKG = 1 CS is referring to the way it is set up in SAP; the package and the case are considered the same thing. The package/case has a unique UPC assigned to it, and a unique UPC is also assigned at the unit load level. This is because this type of Club setup requires the customer to order it in full pallet quantities, so the Pack Size field is set to Club Pack. See the EDI Logic slide for Club Packs for more details. These items are created at a Coman.**
- **These can have one flavor or a variety of flavors. Either way, the UPC's are assigned the same. We do not go down to the pouch level for Club.**
  - **Please note: even though they can be Variety Packs, Club items do not require a 0200 BOM.**
- **This setup type is what is called the "base" or "parent" item. Any items created after, that use the same package UPC, must be created as a Repack setup type, or a "child" item. This is because we can only have one "base" or "parent" item in SAP at a time. These base materials must be set up in SAP first. Once they are set up in SAP, the "child" items, such as repacks (lower or higher case counts), can be set up.**
  - **Please note: When submitting forms for PDR's or PWR's, please submit the Club (non-repack) setup type first. Once codes are assigned, the forms can be submitted for the repacks. This is because the newly assigned UPC's will need to be used in the New Item Form submissions for the other setups. Again, as noted above, ensure that the Club (non-repack) is set up in SAP first, then the others can follow.**
- **Pricing – ZBAS/Red K (1001) for US or ZBAS/Red K (1002) for Canada.**



X	AUn	Measu...	<...	Y	BUn	Measu...	EAN/UPC	Ct	Au

SAP screenshot of the UOM. You can see that 1 PKG = 1 CS and the number of packages/cases on the unit load is 384. The case and package have the same UPC's, and the unit load has a unique UPC.

This is the Club package/case. There are 384 of these on the unit load.

This setup uses a tray. However, the tray does not have a UPC assigned to it and is considered "dunnage".

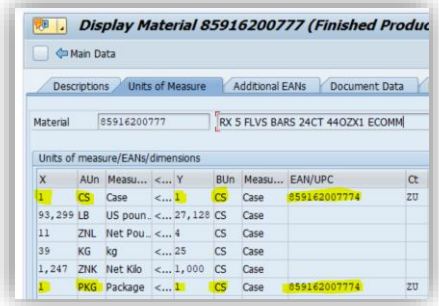
Examples of different Club configurations

← Back to list of Setup Types

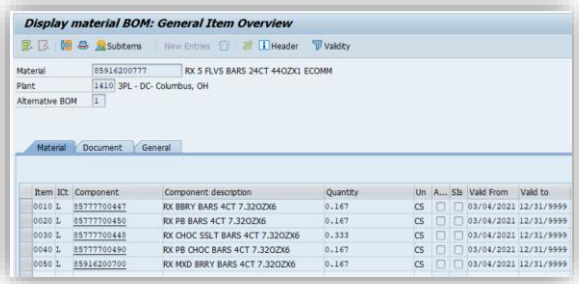
Form: KNA NIF Create
Form Type: Case
Product Type: Ecomm
Product Sub Type: Case, Brown Box
Example SAP Material Number: 85916200777, Variety Pack

NIF (New Item Form) – *NIF_Winshuttle_Support@kellogg.com*

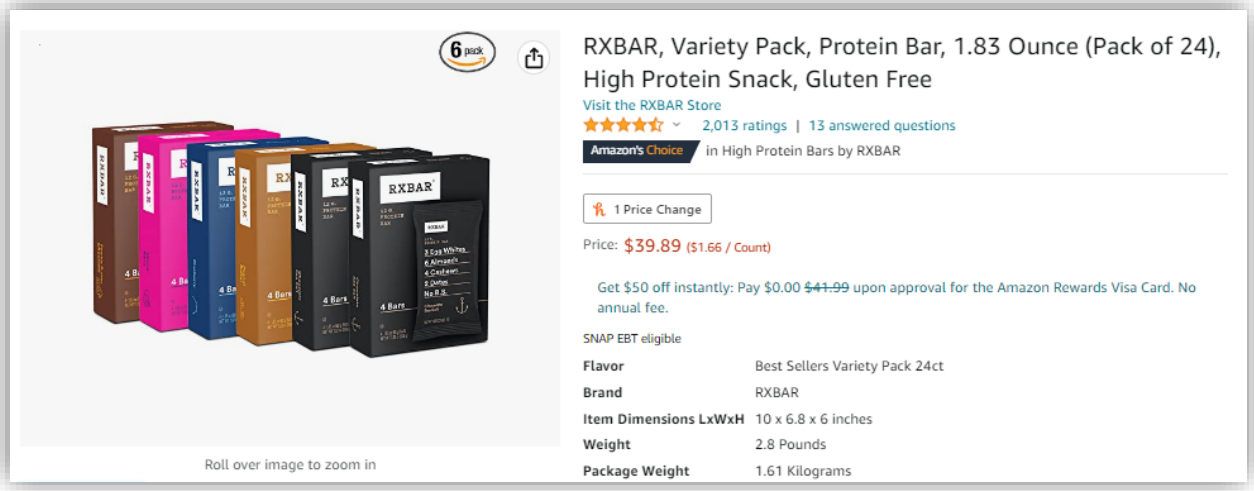
- **Ecomm is a term used to describe a specific type of setup found in the NIF (New Item Form) that is created for Ecommerce customers (i.e. Amazon) for sale on their Ecommerce platform. This is different from the DTC (Direct to Consumer) setup types, in that the DTC items are created for sale on Kellogg's ecommerce platform (Magento). These items are typically set up when there is no Retail case available with the desired products (ex. a specific variety pack that doesn't exist as a Retail case).**
- **Please Note for Amazon: Amazon can purchase retail cases, so an Ecomm case setup is not required if the retail case is sufficient. However, if the intention is to sell the Retail case at a higher price than the Retail ZBAS (1001) price, ZFSP Amazon Pricing records must be created. If they are not created, Amazon will receive Retail ZBAS (1001). See the pricing slide for more details.**
- **This setup type consists of a corrugate case that gets a label applied with a unique UPC. The packages inside may or may not have their own unique UPC's, so for that reason, the same UPC is used for the Case and the Package in SAP.**
- **While these are assembled by VAS type activity, and VAS BOM requirements, BPS is the packaging tech for these, so they do route to Nutrition Labeling.**
- **Pricing – ZBAS/Red K (1001) for US or ZBAS/Red K (1002) for Canada. If the item is specific to Amazon, the Amazon price can be loaded into SAP as ZBAS, and ZFSP records are not required. See the pricing slide for more details.**



SAP screenshot of the UOM. The same UPC is assigned to the case and package.



BOM is set up to be equivalent to what it takes to create one Ecomm case/package.



Item as shown on Amazon's website.

Unique UPC is printed on a label and attached to the case

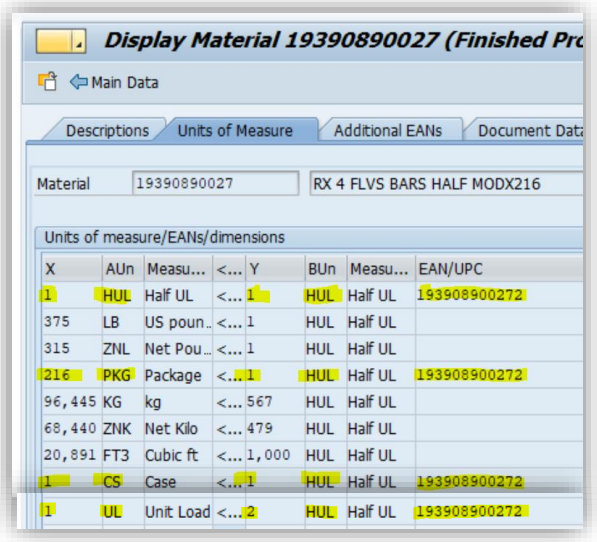
Since there are multiple package UPC's, the case UPC is applied to the package level in SAP.

← Back to list of Setup Types

Form: KNA NIF Create
Form Type: Display
Product Type: Half Mod
Product Sub Type: N/A
Example SAP Material Number: 19390890027

NIF (New Item Form) – *NIF_Winshuttle_Support@kellogg.com*

- **This setup type is a Display, Half Mod. It consists of a Display that has trays of product stacked together to create two half unit loads, that together, create a full unit load. It has a unique UPC that is applied to the Half Unit Load, Package, Case and Unit Load levels. It has a Half Unit Load base unit of measure. It is considered a "parent" or Base item, so the Planning Variant is Base Material.**
- **These are assembled by VAS type activity, with a VAS BOM requirement, at location 1420/Precision only. 12 Associates is the vendor.**
- **Please note: Half Mods are most likely only created with packages, where the end consumer will purchase the full package vs pouches/bars. If it were to be created using the pouches/bars, please ensure that this detail is noted in the NIF, in the Brief Project Overview section. This will ensure the team knows exactly what the final setup will be.**
- **Pricing – ZBAS/Red K (1001) for US or ZBAS/Red K (1002) for Canada.**



X	AUn	Measu...	<...	Y	BUn	Measu...	EAN/UPC

BOM is set up to be equivalent to what it takes to create one half mod.

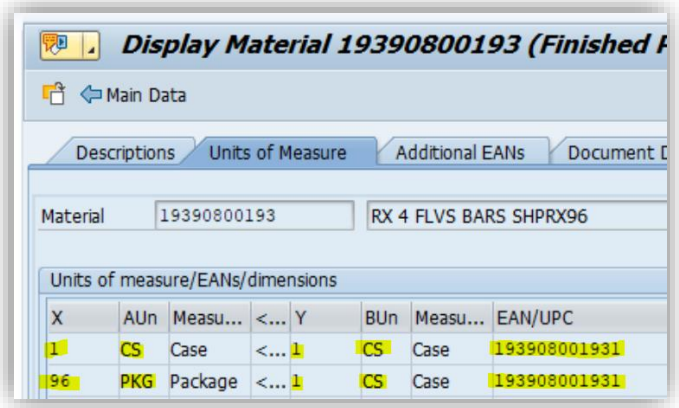
Example of a half mod that is selling the package/sleeve to the end consumer, not the pouch/bar.

← Back to list of Setup Types

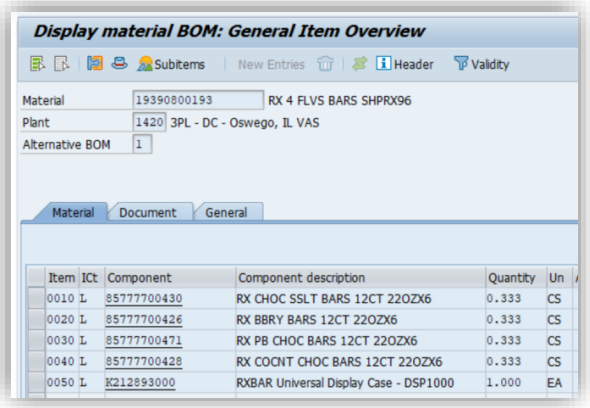
Form: KNA NIF Create
Form Type: Display
Product Type: Shipper
Product Sub Type: N/A
Example SAP Material Number: 19390800193

NIF (New Item Form) – *NIF_Winshuttle_Support@kellogg.com*

- **This setup type is a Display, Shipper. Shippers are custom displays that are created for point-of-purchase or promotions. Shipper displays are self-contained displays stores use to feature retail products for sale with little investment for the retailer.**
- **Shippers are typically created as a corrugate display of product to create one shipper, that is then stacked on a pallet to create a full unit load. It has a unique UPC that is applied to the Case and Package levels. It has a Case base unit of measure. It is considered a "parent" or Base item, so the Planning Variant is Base Material.**
- **These are assembled by VAS type activity, with a VAS BOM requirement, at location 1420/Precision only. 12 Associates is the vendor.**
- **Please note: Shippers can be created with packages, where the end consumer will purchase the full package. Shippers can also be created with pouches, where the end consumer will purchase the bar. The latter example could be referred to as a "single serve" Shipper. No matter how the end consumer is purchasing the product, please ensure that this detail is noted in the NIF, in the Brief Project Overview section. This will ensure the team knows exactly what the final setup will be in SAP.**
- **Pricing – ZBAS/Red K (1001) for US or ZBAS/Red K (1002) for Canada.**



SAP screenshot of the UOM. The same UPC is assigned to the case and package.



BOM is set up to be equivalent to what it takes to create one shipper. In this example, it is also using a "universal" display case which means it is used across multiple displays.

Example of a shipper that is selling the bar to the end consumer, not the package.

Example of a shipper that is selling the bar to the end consumer, not the package.

← Back to list of Setup Types

Form: KNA DTC Simple Bundle 1ct Create
Form Type:
Product Type: DTC Simple Bundle, One Flavor
Product Sub Type: N/A
Example SAP Material Number: 19390800244

New Setup Type – Go live March 2023
NIF (New Item Form) – *NIF_Winshuttle_Support@kellogg.com*

- **The DTC Package level setup, referred to as a "Simple" Bundle or 1ct, is a setup type for an item that will be sold directly to consumers (DTC but also referred to as D2C). The DTC setup types are meant to be sold on Kellogg's ecommerce platform (Magento). Please note: This is different from the Ecomm setup type, which is meant to describe an item that is created specifically for a Customer for sale on their ecommerce platform (i.e. Amazon).**

- **This setup would be done along with the new item setup for a Straight Case with Package Setup Type (or Retail Straight Case), only if the item does not already exist, or for new flavor or food form, for example. In the NIF, on the Requestor Update task, the Requestor would answer the "Will this item be sold at the Package level DTC?" question as Yes. The KNA NIF Create form will automatically kick off the KNA DTC Simple Bundle 1ct Create form at the end of the setup for the Retail Straight Case. The KNA DTC Simple Bundle 1ct Create form also exists as a standalone form in case it is needed.**

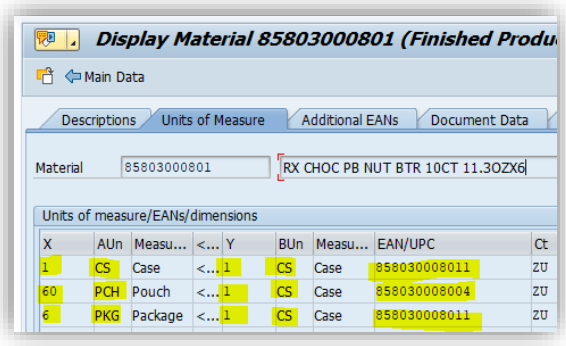
- **The Straight Case with Package setup (parent) must be setup in SAP first. After the parent is set up in SAP, the DTC Simple Bundle must be set up in SAP before it can be sold DTC. The purpose of the Simple Bundle is to take the Retail Straight Case down from the case level down to the package level for sale in Magento. A new "dummy" UPC is assigned for the Case, and the existing Retail Package UPC is used on the Package level and the existing Pouch UPC is used on the Pouch level, if applicable. Meaning, not all items go down to the Pouch level, some stop at Package. An example of this would be the Nut Butters that come in jars.**

- **These items are shipped out of 1903/IDS and do have a DTC BOM requirement. See the DTC BOM slide for more details.**

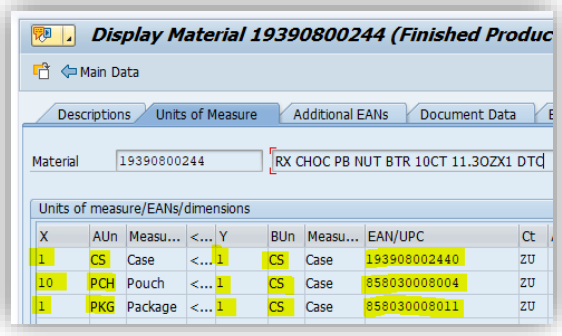
- **Besides the Case, these items have one or two additional levels: Package or Package and Pouch. They are comprised of one flavor. A new, unique UPC is assigned for the Case, and the existing Retail Package and Pouch UPC's (if applicable) are used.**

- **In this DTC Simple Bundle example, we are selling this item on the Magento site as one 10 count package (vs the Retail Straight Case, which is six 10 count packages). This is the 19390800244 RX CHOC PB NUT BTR 10CT 11.3OZX1 DTC item in SAP.**

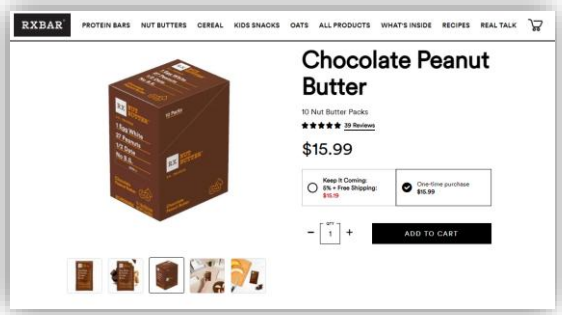
- **The ZBAS/Red K pricing is provided by Category Finance and loaded into 1001 for B2B sales, and 1012 for DTC sales for the US. Canada does not have a separate sales org, so the DTC price is loaded into 1002. *Please note however that Canada is not participating in DTC sales currently.***



SAP setup for the Retail Straight Case



SAP setup for the DTC Simple Bundle



Magento setup for a one flavor DTC Package level setup

← Back to list of Setup Types

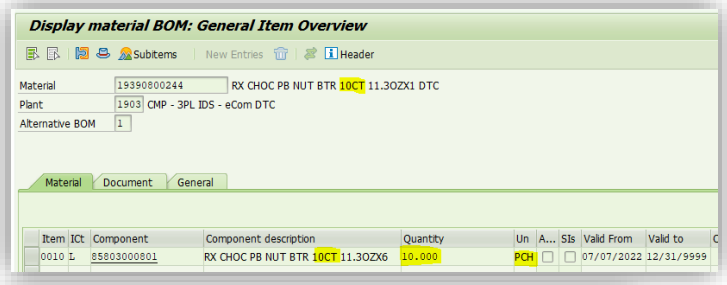
Form: KNA DTC Simple Bundle 1ct Create
Form Type:
Product Type: DTC Simple Bundle, One Flavor
Product Sub Type: N/A
Example SAP Material Number: 19390800244

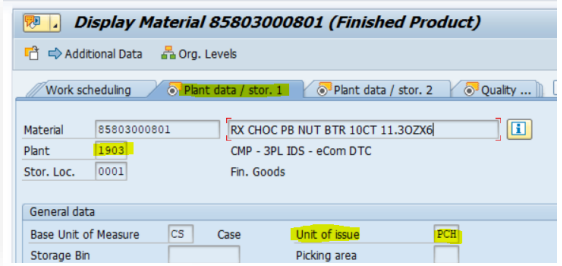
New Setup Type – Go live March 2023
NIF (New Item Form) – *NIF_Winshuttle_Support@kellogg.com*

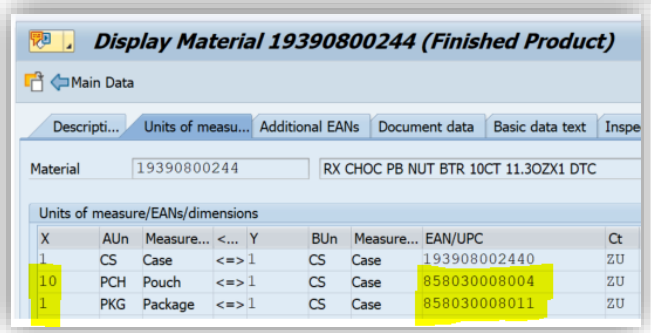
Created via the KNA DTC Simple Bundle 1ct Create form

- **UPC's** – A new "dummy" UPC is assigned for the Case, and the existing Retail Package UPC is used on the Package level and the existing Pouch UPC is used on the Pouch level, if applicable. Meaning, not all items go down to the Pouch level, some stop at Package. An example of this would be the Nut Butters that come in jars.
- **Locations**
  - Created at 0300, extended to 1903/IDS
- **List of Sales Orgs must include the following** -
  - 1012 NUFF DTC Sales
  - 1013 NUFF I/C Sales
- **Basic View**
  - Material Group = REPACK
  - The General item category group (MTPOS_MARA) field = LUMF (Structure/mat. below) vs NORM (Standard item).
- **Sales Org 2**
  - The Item category group from material master (MTPOS) fields = LUMF (Structure/mat. below) vs NORM (Standard item), in all sales orgs.
- **Classification**
  - Count = 1
  - Trade Channel = ONLINE
  - Distribution Method = D2C
  - D2C Bundle = Y
  - Food Count = number of bars/pouches in the package
  - Variant = Customer

- **Pricing**
  - Two prices are provided in the form by Category Finance, to be loaded into 1001 for B2B sales, and 1012 for DTC sales for the US. Canada does not have a separate sales org, so the DTC price is loaded into 1002.
- **BOM**
  - The DTC BOM is set up at location 1903/IDS, with BOM usage = 5 (Sales and Distribution) and 1 (Production).
  - **Please note!** The BOM component is always the **Retail Straight Case.** We need the data in the BOM at the lowest level, which for this item, is the pouch. **In order to ensure this lowest level pulls into the BOM, the Retail Straight Cases need to have the Unit of Issue populated** with the **lowest** level in the units of measure (PCH or PKG), **on the Plant Data Stor. 1 view, at 1903/IDS only.**
  - Quantity is the number of items needed to create **one** DTC Simple Bundle (or package).
- **EDI Xref Table entries** – *details to come…*







← Back to list of Setup Types

Form: KNA DTC Simple Bundle 1ct Create
Form Type:
Product Type: DTC Simple Bundle, Variety pack
Product Sub Type: N/A
Example SAP Material Number: 19390800209

New Setup Type – Go live March 2023
NIF (New Item Form) – *NIF_Winshuttle_Support@kellogg.com*

- **The DTC Package level setup (sometimes referred to as a "Simple" Bundle) is a setup type for an item that will be sold directly to consumers (DTC but also referred to as D2C). The DTC setup types are meant to be sold on Kellogg's ecommerce platform (Magento). Please note: This is different from the Ecomm setup type, which is meant to describe an item that is created specifically for a Customer for sale on their ecommerce platform (i.e. Amazon).**

- **This setup would be done along with the new item setup for a Straight Case with Package Setup Type (or Retail Straight Case), only if the item does not already exist, or for new flavor or food form, for example. In the NIF, on the Requestor Update task, the Requestor would answer the "Will this item be sold at the Package level DTC?" question as Yes. The KNA NIF Create form will automatically kick off the Created via the KNA DTC Simple Bundle 1ct Create form at the end of the setup for the Retail Straight Case. The Created via the KNA DTC Simple Bundle 1ct Create form also exists as a standalone form in case it is needed.**

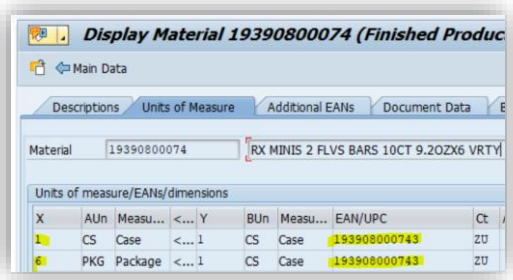
- **The Straight Case with Package setup (parent) must be setup in SAP first. After the parent is set up in SAP, the DTC Simple Bundle must be set up in SAP before it can be sold DTC. The purpose of the Simple Bundle is to take the Retail Straight Case down from the case level down to the package level for sale in Magento. A new "dummy" UPC is assigned for the Case, and the existing Retail Package UPC is used on the Package level and the existing Pouch UPC is used on the Pouch level, if applicable. Meaning, not all items go down to the Pouch level, some stop at Package. An example of this would be the Nut Butters that come in jars.**

- **These items are shipped out of 1903/IDS and there is a DTC BOM Requirement. See the DTC BOM slide for more details on how to populate the DTC BOM section for a DTC Static Bundle in the KNA NIF Create form.**

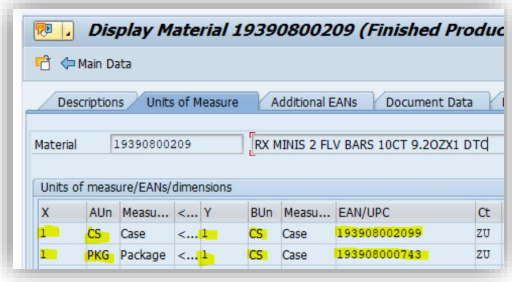
- **Besides the Case, these items have only one additional level: Package. A new, unique UPC is assigned for the Case, and the existing Retail Package UPC is used on the Package level. Variety Packs do not go down to the Pouch level because there are multiple Pouch UPC's inside the Package.**

- **Please note - This DTC example is unique. We are not actually selling this item individually as a Simple Bundle on the Magento site (19390800209). Instead, we are taking two of them, and selling them together, as a "Static" Bundle, which is another DTC setup type, shown in the screen shot below (19390800360). Static simply means that the BOM for this item will always include just these specific items. You can see that only one UPC is assigned and applied to both the Case and the Package levels, which is correct for a Static Bundle.**

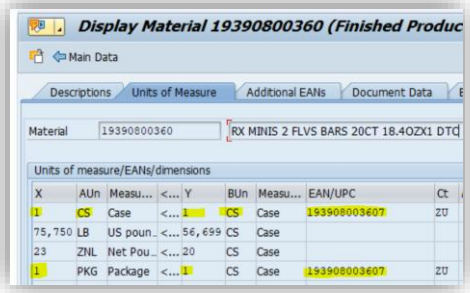
- **The ZBAS/Red K pricing is provided by Category Finance and loaded into 1001 for B2B sales, and 1012 for DTC sales for the US. Canada does not have a separate sales org, so the DTC price is loaded into 1002. *Please note however that Canada is not participating in DTC sales currently.***



SAP setup for the Retail Straight Case



SAP setup for the DTC Simple Bundle



SAP setup for the DTC Static Bundle, shown to the right.
This BOM has special requirements. See DTC Static Bundle.

Magento setup for the DTC Static Bundle

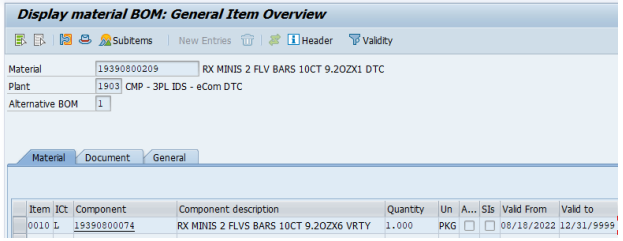
← Back to list of Setup Types

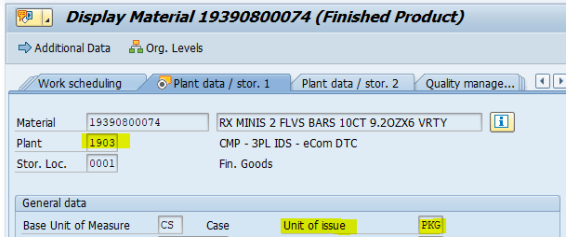
Form: KNA DTC Simple Bundle 1ct Create
Form Type:
Product Type: DTC Simple Bundle, Variety pack
Product Sub Type: N/A
Example SAP Material Number: 19390800209

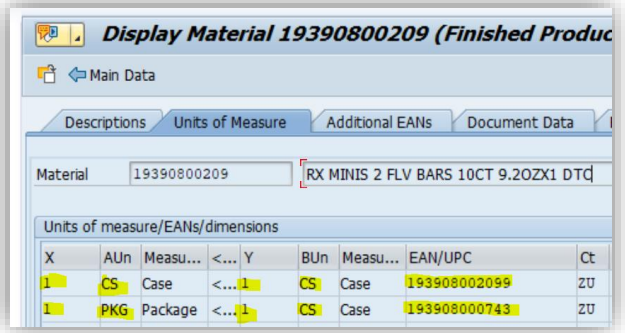
New Setup Type – Go live March 2023
NIF (New Item Form) – *NIF_Winshuttle_Support@kellogg.com*

Created via the KNA DTC Simple Bundle 1ct Create form

- **UPC's** – A new UPC is assigned for the Case, and the existing Retail Package UPC is used on the Package level.
- **Locations**
  - Created at 0300, extended to 1903/IDS
- **List of Sales Orgs must include the following** -
  - 1012 NUFF DTC Sales
  - 1013 NUFF I/C Sales
- **Basic View**
  - Material Group = REPACK
  - The General item category group (MTPOS_MARA) field = LUMF (Structure/mat. below) vs NORM (Standard item).
- **Sales Org 2**
  - The Item category group from material master (MTPOS) fields = LUMF (Structure/mat. below) vs NORM (Standard item), in all sales orgs.
- **Classification**
  - Count = 1
  - Trade Channel = ONLINE
  - Distribution Method = D2C
  - D2C Bundle = Y
  - Food Count = number of bars/pouches in the package
  - Variant = Customer
- **Pricing**
  - Provided by Category Finance and loaded into 1001 for B2B sales, and 1012 for DTC sales for the US. Canada does not have a separate sales org, so the DTC price is loaded into 1002.
- **BOM**
  - The DTC BOM is set up at location 1903/IDS, with BOM usage = 5 (Sales and Distribution) and 1 (Production).
  - **Please note!** The BOM component for a Variety Pack like this is always the Retail Straight Case. This is because we need the data in the BOM at the lowest level, which for this item, is the **package**. **In order to ensure this lowest level pulls into the BOM, the Straight Cases need to have the Unit of Issue populated (as PCH or PKG) on the Plant Data Stor. 1 view, at 1903/IDS only.**
  - Quantity is the number of items needed to create **one** DTC package.
- **EDI Xref Table entries** – *details to come…*







← Back to Simple Bundle Training Links

Form: KNA NIF Create
Form Type: Case
Product Type: DTC Bundle
Product Sub Type: Static (pre-determined Mix of Products)
Example SAP Material Number: 19390800055

New Setup Type – Go live early February 2023

NIF (New Item Form) – *NIF_Winshuttle_Support@kellogg.com*

- **This setup type is a DTC Bundle, Static. The term Static is meant to convey that it is made up of a pre-determined mix of products, so the BOM does not change. It is a setup type that is sold directly to consumers (DTC but also referred to as D2C). The DTC setup types are meant to be sold on Kellogg's ecommerce platform (Magento). Please note: This is different from the Ecomm setup type, which is meant to describe an item that is created specifically for a Customer for sale on their ecommerce platform (i.e. Amazon).**
- **This setup type is found in the KNA NIF Create form. It utilizes existing Straight Cases that must be setup in SAP first.**
- **These items have two levels, case and package, that share the same unique UPC. These can be one flavor, or they can contain multiple flavors. Either way, the BOM remains "static" and does not change. In this DTC Static Bundle example, we are selling this item on the Magento site as one 12 count bundle.**
- **These items are created and shipped out of 1903/IDS, and do have a DTC BOM requirement.**
  - **Please note! The BOM components for this item are the Straight Cases for the pouches. This is because we need the data in the BOM at the lowest level, which for this item, is the pouch. In addition, in order to ensure this lowest level pulls into the BOM, the Straight Cases need to have the Unit of Issue populated on the Plant Data Stor. 1 view, at 1903/IDS only. This is done during set up for the Retail Case in SAP. See the DTC BOM slide for more details on how to populate the DTC BOM section for a DTC Static Bundle in the KNA NIF Create form.**
- **The ZBAS/Red K pricing is provided by Category Finance and loaded into 1001 for B2B sales, and 1012 for DTC sales for the US. Canada does not have a separate sales org, so the DTC price is loaded into 1002.**

← Back to list of Setup Types

Glossary of Acronyms and Commonly used Terms

NIF (New Item Form) – *NIF_Winshuttle_Support@kellogg.com*

0200 BOM – This BOM setup is required for US Variety Packs where the inner items have UPC's on them. The Data Synchronization process requires that the inner items in the package be sent to customers. This however does not apply to Canada at this time.

AFH (Away From Home) – Sales team that was formerly referred to as "Specialty".

Base Material or Base SKU or Base item – "Base" is used to refer to an item that is considered the Base Material. It is typically the everyday item that most customers order. The components inside the Base item are used for "child" items, which are repacked items or reduced case pack items.

Child – This term is used to refer to an item that is dependent on a Base item for it's components. An example of a child item is a Repacked item, or a Reduced Case Pack item. They get a new Case UPC assigned, but use the existing Package UPC of the Base (Parent) item.

Data Synchronization or GDSN (Global Data Synchronization Network) – GDSN is a registry that enables trading partners to globally share trusted product data. It supports accurate, real-time data sharing and trade item updates among subscribed trading partners.

Display – Term used to describe a type of setup that contains a full unit load of product. Variations of Displays are Mod, Half Mod and Quarter Mod (all three are built using trays), Rainbow Mod (built using full cases of product) and Shippers (built using printed corrugate).

Display Variant – These are promotional variants of Base, Every Day Displays (Mods, Half Mods, Shippers, etc). They share UPC's with the Parent or Base item. They do not have pricing loaded, but instead, have a pricing reference which is the Parent or Base item. Customers continue to order the Parent or Base item, and substitution tables are entered into SAP to move it to the Promo Code. This setup type has its own form, separate from the New Item Form Workflow. See also, Promo Code.

DTC – Acronym for Direct To Consumer. Also referred to as D2C. The DTC setup types that are available in the form are meant to be sold on Kellogg's ecommerce platform (see Magento). Additionally, answering yes to the "Will a full case of this product be sold Direct to Consumer?" question on the Requestor Update task means the item you are setting up is also approved for sale as a full case of product, on **our** DTC ecommerce platform (only available for Straight Case setup types). This is different from Ecommerce setup types, which means the item is intended for sale to Ecommerce customers (i.e. Amazon) where they will then sell the item on **their** ecommerce platform (see Ecommerce).

DTC BOM – This BOM setup is required for all DTC setup types: DTC Simple Bundle 1ct, DTC Static Bundle and DTC Dynamic Bundle.

Dump Bin – Used to describe a variation of a Display setup that has loose items inside (ex. cereal cups) that the customer can pick. Usually set up as a Mod, Half Mod or Quarter Mod (see 3800012603).

Glossary of Acronyms and Commonly used Terms continued

Ecomm – Ecommerce. The Ecommerce setup types that are available in the form are meant to be sold to Ecommerce customers (i.e. Amazon) where they will then sell the item on their ecommerce platform. Answering yes to the "Approved to sell via Ecommerce?" question on the Requestor Initiate task means the item you are setting up is also approved for sale on our customers' ecommerce platform. This is different from DTC or Direct to Consumer setup types, which means the item is intended for sale on Kellogg's ecommerce platform (see Magento).

EDI (Electronic Data Interchange) – The computer-to-computer exchange of business documents between trading companies, using a public standard format like UCS or X12.

FERT – Finished Goods. This includes all setup types that are sold, which would all fall under the Case and Display setup types.

HALB – Semi Finished Goods. These are the WIP Cases and WIP Totes/Kones.

Magento - Magento is an ecommerce platform built on open source technology which provides online merchants with a flexible shopping cart system, as well as control over the look, content and functionality of their online store. This is the platform that Kellogg is using for DTC or Direct to Consumer sales.

Non-Traditional Club or Retail Club – This refers to a type of Club setup, that resembles a retail straight case with package UPC setup type.

Pack Size – This field is located in the Classification View in the Material Master, and is used by EDI to determine how an item is handled on orders. There are three choices, RETAIL, CLUB PACK and SINGLE SERVE. CLUB PACK and SINGLE SERVE have logic built around them, and RETAIL has none. See EDI Logic for more details.

Pack Type Use – This field is located in the Classification View in the Material Master, and is used by the AFH (Away From Home, formerly Specialty Channels) team. There are a variety of choices, but Retail items will always be set up as GROCERY, Club items will always use CLUB PACK, Single Serve items will always use SINGLE SERVE, Bulk items will always use BULK and AFH owned items will use all others.

Packaging Profile –The Packaging Profile is used in the Data Synchronization (GS1) process, and provides specific details on the type of item that is being sold to the end consumer. See the **NIF Training Deck** for more details.

Parent – This term is used to refer to a item that is considered a Base item. It is typically the everyday item that most customers order. The components inside the parent item are used for "child" items, which are repacked items or reduced case pack items.

Planning Variant – This is a field within the Material Master that EDI references to find which item is considered the Base Material. If items share package UPC's, there can only be one that is considered the Base Material. The Planning Variant field is where this is indicated within SAP. Other items (children items) that use the same **package** UPC as the Base, will use National, Customer or Limited. A good example of children items would be Reduced Case Packs or Promo Codes.

Glossary of Acronyms and Commonly used Terms continued

NIF (New Item Form) – *NIF_Winshuttle_Support@kellogg.com*

Promo Code – These are promotional variants of Base, Every Day items. They share UPC's with the Parent or Base item. They do not have pricing loaded, but instead, have a pricing reference which is the Parent or Base item. Customers continue to order the Parent or Base item, and substitution tables are entered into SAP to move it to the Promo Code. This setup type has its own form, separate from the New Item Form Workflow. See also, Display Variant.

Rainbow Mod – Refers to a type of Display Full Mod setup type that is built using full cases of product, vs trays of product.

Repack/RCP (Reduced Case Pack) – An item that is created using an existing Package UPC. It is considered a "child" item. RCP means Reduced Case Pack.

Single Serve – Term used to describe an item that can be found (for example) at the checkout, where the consumer can purchase just one "single serve" vs an entire package or carton. This type of setup is not currently utilized by RX.

SKU/Item/Material/Product – Often used to describe the same thing.

Straight Case – Term used to describe an item that is a basic setup type. It consists of a case and a package, *or* a case, package and a pouch level.

Trade Channel – Description of base unit or a packaging item's intended trade channel.

Traditional Club – This refers to a type of Club setup where the case and the package are considered the same thing (there is no case). These setup types require the customer to order them in full pallet quantities.

TPM (Trade Promotion Planning) – System used by Sales to do short-term trade promotion planning. EDLP (Every Day Low Price) planning in done in Foundations, but it flows to TPM and then to E1P for the OI allowances.

VAS (Value Added Services) – Refers to the process used to create Displays and Repacks.

VAS BOM – This is the BOM information that is needed to communicate what components and quantities are used to create one item.

VERP – Knumbers (corrugate, packaging)

WIP (Work In Progress) – Term used to describe a type of setup for product that is not sold to customers, but used to transfer food within and between plants. There are two kinds of WIP's, one is finished product in cases (WIP Case), and the other is large totes of food, cereal flakes for example (WIP Tote). Both are set up with the Material Type of HALB.

0200 BOM

NIF (New Item Form) – *NIF_Winshuttle_Support@kellogg.com*

- **The 0200 BOM is most often only needed for variety pack setups. This is because there are multiple UPC's involved in the setup of the material master, so only one UPC is applied to both the Case and Package levels. For this reason, the details for what is inside the item is needed for the Data Sync process, so they can communicate to the customer what is inside the variety pack (this does not apply to Club).**
- **The 0200 BOM is needed if –**
  - **The item is a variety pack, with multiple UPC's inside**
- **The 0200 BOM is not needed if –**
  - **The items inside do not have UPC's**
  - **The item uses a VAS BOM (the VAS BOM is sufficient for Data Sync)**
  - **The item uses a DTC BOM (the DTC BOM is sufficient for Data Sync)**
  - **The setup is Club**
  - **The setup is for Canada**
- **The components used in the 0200 BOM are existing SAP FERT (Finished Goods) or HALB (Semi Finished Goods) materials. Use the FERT items if they exist, else use the HALB's.**
- **0200 BOM Calculator is attached, with examples and explanations for how to populate each column, as shown below.**

Microsoft Excel Worksheet

0200 BOM Calculator
v. 7/6/22

Column A
This is the SAP Material Number of each component in the Variety Pack that is being created. It is NOT the UPC. Populate this value into column A.

Column B
This information comes from the 0200 BOM components in column A. It is the number of packages or pouches (always use the lowest level, but never tray) per case. For these components, this is the pouch and there are 48 pouches per case for each one. Populate this value into column B.

Column C
This information pertains to the new Variety Pack that is being set up in SAP. 3800016714 is our example item, and you can see that it has 4 bars of each flavor. Populate this value into column C.

Column D
This information pertains to the new Variety Pack that is being set up in SAP. 3800016714 is our example item, and you can see that it is 6 packages per case. Populate this value into column D.

Column E
This is the calculated value that will be loaded into the 0200 BOM in SAP.

0200 BOM Component Material Number	0200 BOM Component's # of packages or pouches per Case (always use the lowest level - never tray)	How many packages or pouches of each component are needed to create one Variety Pack? (always use the lowest level - never tray)	Number of packages per case for the Variety Pack that is being set up	# of packages or pouches needed per variety pack / # of packages or pouches per case for the component x # of packages per case for the Variety Pack that is being set up C2/B2*D2
3800016749	48	4	6	0.500
3800016748	48	4	6	0.500
3800016745	48	4	6	0.500

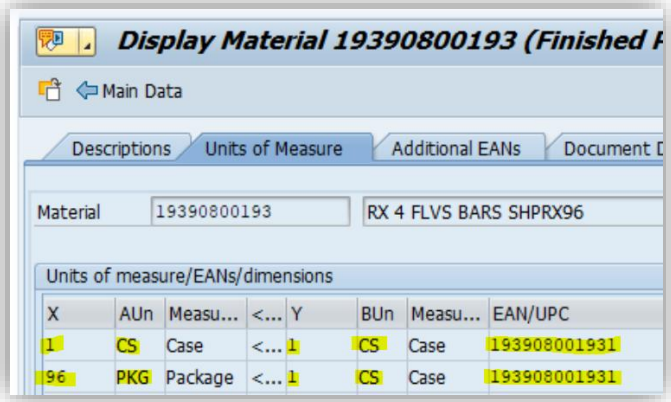
← Back to list of Setup Types

VAS BOM

NIF (New Item Form) – *NIF_Winshuttle_Support@kellogg.com*

- **The VAS BOM is only needed for items that are being created at a DC, by a VAS (values added services) type process.**
- **Common types of setups that use this process are –**
  - **Displays (Shippers, Mods, Half Mods, Quarter Mods)**
  - **Repacks**
  - **Ecomm cases**
- **The VAS BOM is made up of existing straight cases (retail cases). It can be calculated as follows:**
  - **Using the number of bars - Divide the number of bars needed for this item by the number of bars in the case.**

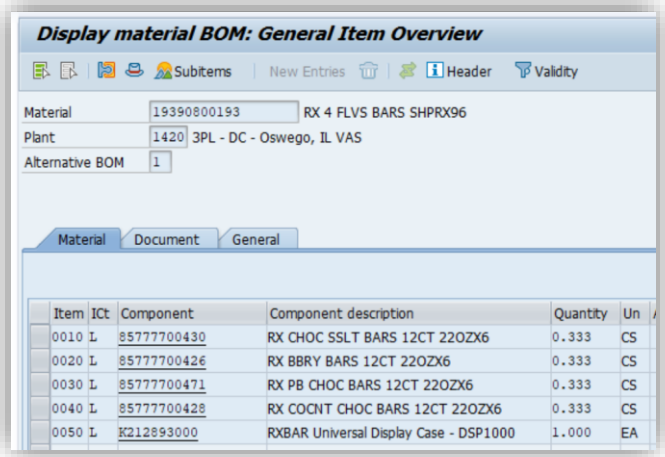
Material Number of VAS BOM Component	# of BARs in Case	# of BARs needed for this item	SAP BOM Qty
85777700430	72	24.00	0.333
85777700426	72	24.00	0.333
85777700471	72	24.00	0.333
85777700428	72	24.00	0.333



SAP screenshot of the UOM. This Display Shipper has 96 packages.

  - **Using the number of packages – Divide the number of packages needed to create the new item by the number of packages in the case.**

Material Number of VAS BOM Component	# of PKGs in Case	# of PKGs needed for this item	SAP BOM Qty
85777700430	6	2.00	0.333
85777700426	6	2.00	0.333
85777700471	6	2.00	0.333
85777700428	6	2.00	0.333



BOM is set up to be equivalent to how many packages or pouches from each case it takes to create one shipper.

- **A VAS BOM calculator is attached if helpful.**

Microsoft Excel Worksheet

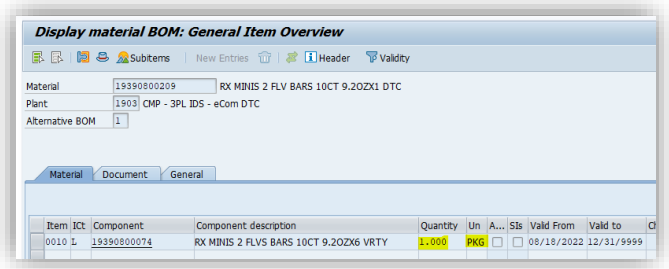
VAS BOM Calculator v. 7/6/22

← Back to list of Setup Types

DTC BOM

- **The DTC BOM is only needed for DTC items that are being created at 1903/IDS.**
- **The setup types that use this BOM are DTC Simple Bundle 1ct, DTC Static Bundle and DTC Dynamic Bundle.**
- **. Examples of each are found on this slide and the following slide.**
- **The DTC Simple Bundle 1ct BOM is made up of existing straight cases (retail cases). It can be calculated as follows:**
  - **19390800244, One flavor**
    - **BOM Component is the straight case (retail case) for the item that is being set up.**
    - **Quantity is the number of lowest level items it takes to create one DTC item. In the example below, you can see that it takes 10 pouches to create one DTC Package. These components must have the lowest level in the units of measure populated in the Unit of Issue field within the material master at 1903/IDS.**

  - **19390800209, Variety Pack**
    - **BOM Components are the straight cases (Retail Straight Cases) for the item that is being set up.**
    - **Quantity is the number of lowest level items it takes to create one DTC item. In the example below, you can see that it takes 1 package to create one DTC Package. These components must have the lowest level in the units of measure populated in the Unit of Issue field within the material master at 1903/IDS.**



← Back to list of Setup Types

DTC BOM

- **The DTC Static Bundle BOM is made up of existing straight cases (retail cases). It can be calculated as follows:**
  - **19390800055**
    - **BOM Components are the straight cases (retail cases).**
    - **Quantity is the number of lowest level items it takes to create one DTC item. In the example below, you can see that it takes 2 pouches of each flavor to create one 12 count DTC Package. These components must have the lowest level in the units of measure populated in the Unit of Issue field within the material master at 1903/IDS.**

EDI Logic – Case, Club, Traditional 1PKG=1CS

EDI - *ProEcommerce@kellogg.com*
NIF (New Item Form) – *NIF_Winshuttle_Support@kellogg.com*

- **The Pack Size Field in the Classification View is used in EDI Logic to determine how an item is handled on orders. There are three choices: Retail (has no logic tied to it), Club Pack (explained below) and Single Serve (not used by RX).**

- **For business units K1, SPCLTY, and KASHI only, customers must order in a quantity that is equal to the cases per unit load set up in Material Master, OR they can order in unit load quantity with the unit load unit of measure.**

  - **For these business units, Order To Delivery (OTD/Customer Service) will see an "Invalid Quantity Error" on orders if the customer does not order the correct quantity (i.e. if they order with a quantity that is larger than the cases per unit load but not divisible by the cases per unit load, as shown in the screen shot below.)**

Item	Material	Order Quantity	Un	S	Description
260	3899999999	320.000	CS		003800077900 3800010757 Invalid Quan...

- **If the quantity ordered is smaller than the number of cases per unit load, SAP converts the unit of measure to UL, but leaves the quantity alone.**
